GENERAL INFORMATION:

APPLICANT: Wyeth

TITLE OF INVENTION: WILLIAM

TITLE OF INVENTION: HUMAN OSTEOARTHRITIS AND HUMAN PROTEASES

FILE REFERENCE: 031896-043000 (AM 101081)

CURRENT APPLICATION WYBER: 2004-10-04

NUMBER OF SEQ ID NOS: 319805

SOFTWARE: PatentIn version 3.2

SEQ ID NO 233030

LENGTH: 25
                                                                                                                                                                                                                                                                                                                  APPLICANT: Mounts, William
TITLE OF INVENTION: NUCLEIC ACID ARRAYS FOR DETECTING GENE EXPRESSION ASSOCIATED WITH

GENERAL INFORMATION:

APPLICANT: Gleave, Martin

APPLICANT: Jansen, Burkhard

TITLE OF INVENTION: Treatment of Melanoma by Reduction in Clusterin Levels

TILLE REFERENCE: UBC. P-0.35

CURRENT APPLICATION NUMBER: US/10/646,391A

CURRENT APPLICATION NUMBER: US 60/405,193

PRIOR APPLICATION NUMBER: US 60/319,748

PRIOR APPLICATION NUMBER: US 60/319,748

PRIOR FILING DATE: 2002-08-21

PRIOR PLING DATE: 2002-09-23

PRIOR FILING DATE: 2002-09-03

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-10-646-391A-40

Sequence 40, Application US/10646391A

Publication No. US20040082534A1

GENERAL INFORMATION:
APPLICANT: Gleave, Martin

TITLE OF INVENTION: Treatment of Melanoma by Reduction in Clusterin Levels
FILLE REPRENCE: UGC. P-0.35

FILLE REPRENCE: UGC. P-0.35

CURRENT APPLICATION NUMBER: US/10/646,391A

CURRENT FILING DATE: 2003-09-21
                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
